

Das INO^{Top}® Spannsystem kann auf nahezu jedem vorhandenen Spann-
futter ab einer Durchmessergröße von
260 mm, unabhängig vom Backenan-
schluss verwendet werden. Verformun-
gen durch den Spannprozess sind da-
mit kein Thema mehr.

The INO^{Top}® clamping system can
be used on almost any existing chuck
from a diameter of 260 mm, no mat-
ter which jaw connection is used.
Deformations caused by the clam-
ping process are therefore no longer
an issue.

INOTop®

Spannen ohne Druck
Clamping without pressure

OPTIMALE RUNDHEIT DURCH GEGENLAGER

Mit INOTop® erreichen Sie höchste Rundheiten durch das Prinzip des „festen Gegenlagers“. Speziell dünnwandige Bauteile können mit INOTop® polygonfrei gespannt werden.

- Zentrieren des Bauteils ohne Druck von außen
- Für polygonfreies Spannen
- Perfekte Rundheitsergebnisse
- Definierte Kräfteinleitung durch die bewegliche Spannbacke
- Kostengünstig in der Anschaffung
- Keine teuren Sonderspannlösungen notwendig

OPTIMAL ROUNDNESS DUE TO COUNTER BEARINGS

INOTop® produces best roundness results thanks to the fixed counter bearing principle. By using INOTop®, thin-walled parts in particular can be clamped without polygon formation.

- Part is centred without pressure from outside for clamping
- Without polygon formation
- Perfect roundness results
- Defined clamping force by the moveable jaw
- Low-costs
- No expensive special clamping solutions needed

Verformungsarm Spannen

Low deformation clamping

SPANNEN OHNE DRUCK

Die innovative **INOTop**[®]-Hybridspannbacke von HWR wurde speziell für verformungsempfindliche Bauteile in der Drehbearbeitung konzipiert. Verformungsempfindliche Bauteile werden im herkömmlichen Spannfutter mit **INOTop**[®] ohne Druck von außen über die Futterfunktion nur zentriert und dann von innen gespannt. Damit verhindert **INOTop**[®] unerwünschte Polygonbildungen im Spannprozess. Drehergebnisse, die zuvor nur mit kostenintensiven Sonderspannlösungen zu realisieren waren, können nun ganz einfach mit der **INOTop**[®]-Hybridspannbacke von HWR günstig erreicht werden. Mit **INOTop**[®] erreichen Sie höchste Rundheiten durch das Prinzip des festen Gegenlagers.

CLAMPING WITHOUT PRESSURE

The innovative **INOTop**[®] hybrid clamping jaw by HWR was designed specifically for turning deformation-sensitive parts. In conventional chucks with **INOTop**[®], components that are sensitive to deformation are simply centred without external pressure via the chuck function and then clamped from the inside. **INOTop**[®] thus prevents unwanted polygon formation. Turning results that were previously only possible with costly special clamping solutions can now be achieved at low cost quite easily. With the innovative **INOTop**[®] hybrid clamping jaws by HWR, **INOTop**[®] produces best roundness results thanks to the fixed counter bearing principle.

Herkömmliche 3-Punkt-Spannung
Conventional 3-point clamping

DAS FUNKTIONSPRINZIP

Beim herkömmlichen Spannen wird der Spanndruck über die Spannpunkte in das Werkstück eingeleitet. Bei dünnwandigen Werkstücken nimmt dieser Spanndruck erheblichen Einfluss auf die Geometrie des Werkstücks. Die Folge ist eine Verformung durch den Spannprozess, welche sich negativ auf die Rundheitsergebnisse auswirkt.

Bei der Verwendung von INOtop® wird die Funktion des Spannfutters nur zum Zentrieren des Werkstücks und nicht für den Spannprozess selbst verwendet. Das bedeutet, dass der Spanndruck so weit reduziert werden kann, dass nach dem Zentrieren des Werkstücks kein weiterer Spanndruck ins Werkstück eingeleitet wird. Im Anschluss an den Zentriervorgang wird nun über die manuelle Betätigung der Spindel in der INOtop®-Backe die bewegliche Greiferbacke von innen gegen die Zentrierung, das feste Gegenlager, gezogen. Die Spannung findet ohne Einfluss auf die Werkstückgeometrie statt.

Das INOtop®-Gegenlagerprinzip
The INOtop® counter bearing principle

HOW IT WORKS

In conventional clamping, the clamping pressure is introduced into the workpiece via the clamping points. With thin-walled workpieces, this clamping pressure has a considerable influence on the geometry of the workpiece. The result is a deformation due to the clamping process, which has a negative effect on the roundness results.

When INOtop® is used, the function of the chuck is only used for centering the workpiece and not for the clamping process itself. This means that the clamping pressure can be reduced to such an extent that no further clamping pressure is applied to the workpiece after the workpiece has been centered. Following the centering process, the moving gripper jaw is now pulled from the inside against the centering, the fixed counter support, by manually actuating the spindle in the INOtop® jaw. The clamping has no influence on the workpiece geometry.
